

mail signature

Email branding and compliance made easy

The problem

Your organisation has worked hard to develop a corporate image - your logos, signage and business cards.

Everything you do should say who you are and what you stand for. That consistency will be incomplete without Crossware Mail Signature.

You need to ensure that your correct company logo is used on all emails, and you want to make sure that your outgoing emails are compliant with current legislation.

The solution

Crossware Mail Signature is a server-based application that automatically adds compliant, personalised and attractive email signatures to all out-going emails.

These signatures may include legal disclaimers, logos, graphics and advertising banners that can be randomised or specific to certain recipients.

Crossware Mail Signature means no more setting up individual signatures on user's workstations and no design changes to your Domino Directory or email template.

Crossware Mail Signature can take care of your compliance needs too, including personalised disclaimers and legislative disclosure requirements on all outgoing emails.

Manage the design of your signature block, including logos and fonts centrally using the signature configuration database.

Include personalised information (such as job title, phone number and department) that can be pulled directly from your Domino Directory or other Notes databases.

Supported client platforms

Supports Lotus Notes 6 and above (running on Windows, Mac or Linux), Lotus iNotes, Blackberry, Lotus Traveler Apple iPhone.

In fact, Crossware Mail Signature supports any client that you use to send emails through your Domino server.

Features and benefits

- Eliminate local configuration of signatures and logos
- Signatures are appended as the emails are sent, saving space in your mail files
- Marketing messages can be targeted to specific email recipients
- Certified for every Lotus Domino platform including Windows, Linux, zLinux, IBM i, Solaris and AIX
